

BOTS Trading Card Creator – Web Experience (v1)

Scope: Mobile■first web experience for creating a personalized digital BOTS trading card in ~1 minute. This document includes only features confirmed for v1.

1. Entry & Start

User opens the link and lands on a simple start screen.

- Primary action: Tap **Start**
- Assets preloaded: card frames (Series 1–4 + Specialty), fonts, layout constants

2. Photo Capture & Crop (114:97)

User is prompted to provide a photo that fits the required 114:97 aspect ratio.

- Options: Take a selfie or choose an existing photo
- Visible crop window locked to 114:97
- User can pan and zoom within the crop area
- User confirms photo by tapping **Use Photo**

3. Text Entry (While Image Stylizes)

While the portrait stylization loads, the user enters card text.

- Title
- Tagline
- Fun Fact
- Pro Tip
- Basic validation only (character limits, required fields)

4. Card Reveal

Once the stylized portrait is ready, the completed card is revealed.

- Stylized portrait placed into the card frame
- User-entered text rendered into fixed layout zones

5. Series Swipe (Frame■Only)

User can swipe between card series without reprocessing the image.

- Series 1 – Blue
- Series 2 – Red
- Series 3 – Green

- Series 4 – Yellow
- Specialty – Rainbow
- Only the frame/theme changes; portrait and text remain the same

6. Export & Share

User can save or share their finished card.

- Download card as an image
- Share via native device share options (when available)

Design & Rendering Notes

- Final card is composed client-side using layered assets
- Portrait is masked into a fixed 114:97 window
- Text follows predefined layout and line limits
- Series switching is instant due to frame-only swaps
